

GroupSelect

0) Copy and paste the data from PoliticalCandidate.txt
1) Display the records in the candidate table such that first name, last name and dob appear as one single column with a column alias named (full information). Place a comma as a separator between each field. Also make sure that you upper case the first letter of both the first and last name. (Use the concat function or the symbols) e.g. John,James,01 Feb 90
2) Display the name and age of each of the candidates. (You have to calculate the age using the various date functions based on date of birth)
3) Display the last name of all the candidates. Make sure that no duplicate last names are displayed
4) Display the first name of all the candidates who are greater than 40 years old
5) Display the first name of all the candidates whose salary is null, as well as salaries that are between 20,000 and 40,000
6) Display the first name of all the candidates that begin with the character 'C' regardless of case and are older than 40 years old
