

### Constraints

<b>Given the two tables in the previous group lab complete the following:</b>
1) Create a check constraint on salary greater than 10000 but less than 50000. Your constraint should be given a name
2) Add a not null constraint to PartyDesc. Do not give a name to your constraint
3) Disable the check constraint on salary
4) Add a foreign key constraint. You have to add an additional column to the proper table. Give your constraint a name (NOTE: Make sure you pick the right table)
5) Disable the foreign key constraint
6) Drop the foreign key constraint
